

1. Create a Rectangle class with:

- Attributes: length, width
- Methods:
 - area()
 - perimeter()
- Create 2 Rectangle objects. One object displays area() and the other object displays perimeter()

2. Create a Person class with:

- Attributes: name, age
- Methods:
 - introduce() → prints "Hi, I am [name], and I am [age] years old."

Create 2 Person objects and call introduce() on both.

3. Create a Book class with:

- Attributes: title, author
- Methods:
 - details() → prints "Book: [title] by [author]"

Create 2 Book objects and show their details.

4. Create a Circle class with:

- Attribute: radius
- Methods:
 - area() → returns area (use 3.14 for π)
 - circumference() → returns circumference

Create one circle with radius 5 and print area and circumference.
