

Probability Practice Questions (Numericals)

- Q1.** A die is rolled once. Find the probability of getting a number greater than 3.
- Q2.** A card is drawn from a deck of 52 cards. Find the probability of getting a face card.
- Q3.** A bag contains 7 red, 5 blue, and 8 green balls. One ball is selected. Find the probability that it is red and not blue.
- Q4.** A number is chosen from 1 to 20. Find the probability that it is divisible by 4.
- Q5.** In a class of 50 students, 28 like Mathematics, 22 like Science, and 10 like both. Find the probability that a randomly selected student likes Mathematics or Science.
- Q6.** A card is drawn. Find the probability that it is a heart or a king.
- Q7.** A die is rolled. Find the probability of getting 2 or 5.
- Q8.** A card is drawn. Find the probability of drawing a queen or a jack.
- Q9.** Two coins are tossed. Find the probability of getting two heads.
- Q10.** A die is rolled and a coin is tossed. Find the probability of getting a 4 and a head.
- Q11.** The probability that a machine works on a given day is 0.9. Another independent machine works with probability 0.8. Find the probability that both work.
- Q12.** A student passes Physics with probability 0.7 and Chemistry with probability 0.6 independently. Find the probability that the student passes at least one subject.
- Q13.** A bag contains 5 white and 3 black balls. Two balls are drawn without replacement. Find the probability that both are white.
- Q14.** A deck has 52 cards. Two cards are drawn without replacement. Find the probability that both are aces.
- Q15.** A box contains 4 red and 6 blue balls. Two balls are drawn without replacement. Find the probability that the first is red and the second is blue.
- Q16.** Three students are selected from a group of 5 boys and 4 girls. Find the probability that all selected students are girls.
- Q17.** A card drawn is known to be red. What is the probability that it is a king?
- Q18.** A die shows an even number. What is the probability that it is greater than 4?
- Q19.** Factory A produces 70% of bulbs and 3% are defective. Factory B produces 30% and 5% are defective. A defective bulb is selected. Find the probability that it came from Factory B.

Q20. A disease occurs in 2% of people. A test gives positive for sick people with probability 96% and positive for healthy people with probability 8%. A person tests positive. Find the probability that the person actually has the disease.
