

1. Create a 1D NumPy array containing the numbers from 10 to 50 (inclusive) with a step of 5.
 - Print the entire array.
 - Access and print the 3rd element.
 - Access and print the last element using negative indexing.
2. Create a 2D NumPy array of shape (3, 4) filled with numbers from 1 to 12 (row-wise).
 - Print the entire array.
 - Access and print the element at row 1, column 2.
3. Create a 3D NumPy array of shape (2, 3, 4) filled with sequential numbers starting from 1.
 - Print the entire array.
 - Access and print the element at depth 0, row 1, column 2.
4. Calculate mean median Variance, Standard deviation of
 - a. 12,32,56,32,87,65,45,32,12,32
 - b. 34,56,87,98,12,43,21,45,67,87,22,43
