

Assignment 7 (Python Function)

1. Write a function named `calculate_area(length, width)` that calculates and returns the area of a rectangle.

Requirements:

1. Accept length and width as parameters;
2. Return the area;
3. Call the function and display the returned value.

2. Write a function `display_employee(**kwargs)` that accepts employee information using keyword arguments and displays each key-value pair.

Take at least 5 employee information by yourself.

3. Implement the concept of a function in **Assignment 6**.
